President Robert Miller Reiterates Future Electronics Unique Supply Chain Management Strategies

*Robert Miller, President of Future Electronics, recently reiterated the entire Future Electronics team for establishing unique supply chain management*

*Online PR News - 24-January-2017 -* Future Electronics, a global leading distributor of electronic components, offers a variety of unique supply chain solutions, including a program called Future Managed Inventory (FMI).

President and CEO Robert Miller continues to be involved in the strategies for planning, executing and continuously maintaining unique and effective supply chain management strategies to ensure security of supply for customers.

"Future Managed Inventory (FMI) is a unique concept in the world of electronics distribution. While other distributors may talk about bonding inventory, only Future Electronics offers a true electronic bonding process. When product is released from FMI, the material is first pulled from the company's available-to-sell (ATS) inventory. If the ATS runs low, only then is the material pulled from the FMI bond, resulting in genuine safety stock for customers," explained Tom Galligani, Vice President of FIRST Supply Chain Solutions for Future Electronics.

Future Managed Inventory offers Just-In-Time (JIT) deliveries, with near zero lead times, so that customers get what they need, when they need it. Future Electronics, founded by Robert Miller, President, in 1968, maintains a keen focus on ensuring security of supply for customers.
